

Tippet retainer band laser-labeled with tippet size for easy ID

on the water. Metal grommet makes for easier tippet

dispensation and keeps tippet in place

Mirage MaxKnot NEW!

MaxKnot provides better action and a stronger connection.

This fluorocarbon tippet material offers the best combination of wet-knot strength, suppleness, and abrasion-resistance period. Its wet knot strength is up to 49% stronger than regular Mirage. It's superior because it's created through a special double-extrusion method that gives the outer surface more suppleness and the interior superior tensile strength. Guides tell us that MaxKnot is tougher & stronger while also providing better action to the fly. The 40 meters spools make it an even greater value.
